Evening Brief

Date: Sunday, July 30, 2017

Weather Summary

*** Near Record Breaking Heat This Week ***

Showers and thunderstorms will develop Monday afternoon across southern Nevada and southern/southeastern Utah and the Arizona strip. Most of these storms will be accompanied by wetting rain. Gusty winds are possible in the vicinity of storms.

Preparedness Levels

Great Basin	3
National	4

Great Basin Fire Activity (from Irwin): Light Activity

New Fires and Acres: 23 fires for 9,549.4 acres 0 acres large fire growth, 4 new large fires

Resources:

- Crews: 15 T1 IHCs in GB: 7 committed, 1 R&R, 7 available.
- GBCC has committed an estimated 66 + type 3, 4, 6 engines.
- 6-T1 and 8-T2 helicopters are available in GACC.

Great Basin Fire Potential Summary

Fuels continue to moisten across much of the region, as we are several days into monsoonal activity. The most rapid moistening occurred across Central and Eastern Nevada, where the most widespread precipitation has occurred over the past few days. Lighter fuels, represented by 10-hr FM have seen the most rapid moistening over the past few days.

ERC's will remain critical over much of Idaho, but also have begun to edge downwards slightly in response to the more humid conditions.

Fire danger remains elevated across far western and northern portions of the Great Basin, and it will be these areas that will dry out the quickest early this week during the upcoming heatwave.

Sagebrush live fuel moisture, which has a much slower response time to short term precipitation, has been on a rapid downward trend the past few weeks in most areas, finally reaching near to just below normal mid-summer levels across the northern and western portions of the Great Basin. Sagebrush live fuel moisture across Central NV/UT has dropped significantly to below normal and in some areas is approaching record lows.

We have issued a Great Basin *Fuels and Fire Behavior Advisory for Nevada and Utah*, available at the following link:

Great Basin
Coordination Center
